- Males and females are equally affected.
- Unaffected parents can have affected children if they are carriers.
- Genotype inference: Carriers are heterozygous, unaffected individuals are homozygous recessive.
- Answer key guidance:
- Look for consanguinity or unaffected carrier parents producing affected offspring.
- The presence of affected siblings with unaffected parents suggests recessivity.

X-Linked Patterns

- X-linked dominant:
- Affected males pass the trait to all daughters.
- Affected females may pass to both sons and daughters.
- Answer keys often highlight affected males in successive generations.
- X-linked recessive:
- Affected males often have carrier mothers.
- Males are more frequently affected.
