Q3: What are the different modes of transport across the cell membrane?

Answer:

Cells employ various mechanisms to transport substances across the membrane:

- Diffusion: Movement of molecules from higher to lower concentration without energy (e.g., oxygen into cells).
- Facilitated Diffusion: Diffusion with the help of carrier or channel proteins.
- Osmosis: Diffusion of water across a semi-permeable membrane.
- Active Transport: Movement of molecules against concentration gradient using energy (ATP), involving transport proteins.
