Prepa Capes Maths 2018 Alga Bre Arithma C Tique

The preparation for the Capes (Certificat d'Aptitude au Professorat de Lycée) in mathematics is a rigorous process that demands a thorough understanding of numerous mathematical topics. Among these, algebra, sequences and series (arithmétique), and discrete mathematics (arithmétique) play a pivotal role. The 2018 Capes math exam presented candidates with challenging problems in these areas, particularly focusing on algebraic manipulations, properties of sequences, and discrete structures. This article aims to provide a comprehensive overview of the key concepts, typical questions, and strategies related to the themes of algebra, sequences, and discrete mathematics as encountered in the 2018 Capes math exam, with a special emphasis on algebraic and arithmetic techniques.

Understanding the Scope of the 2018 Capes Maths Exam

The Core Topics Covered

The Capes math exam tests candidates on a broad spectrum of mathematical disciplines, including:

- Algebraic manipulations and equations
- Sequences and series (arithmétique and géométrie)
- Discrete mathematics (combinatorics, set theory, logic)
- Functions and their properties
- Mathematical reasoning and proof techniques

In 2018, specific emphasis was placed on problems involving algebraic structures, the manipulation of sequences, and discrete math concepts ? notably, problems involving arithmetic progressions and algebraic identities.

Algebra in the 2018 Capes Math Exam

Key Concepts in Algebra

Algebra remains a foundational component of the exam, with questions often involving:

- Polynomial identities
- Factoring and expanding expressions
- Solving equations and inequalities
- Working with algebraic functions

Typical Algebraic Problems

Example Problem:

Given a polynomial $(P(x) = ax^2 + bx + c)$ with real coefficients, find the conditions on (a, b, c) such that $(P(x))$ is divisible by $(x - 1)$ and $(x + 2)$.

Solution Approach:

- Use the Remainder Theorem: If $(P(x))$ is divisible by $(x - 1)$, then $(P(1) = 0)$.
- Similarly, divisibility by $(x + 2)$ implies $(P(-2) = 0)$.
- Set up the equations:

- $(P(1) = a + b + c = 0)$
- $(P(-2) = 4a - 2b + c = 0)$

- Solve this system for (a, b, c) to determine the necessary conditions.

Sequences and Series (Arithmétique) in the 2018 Exam

Focus on Arithmetic Progressions

Sequences, especially arithmetic progressions (AP), are a recurring theme. Understanding their properties and how to manipulate them is crucial.

Definitions and Properties

- Arithmetic Sequence: A sequence (u_n) where each term differs from the previous by a constant difference (d) .

$$(u_{n+1} = u_n + d)$$

- General term: $u_n = u_1 + (n - 1)d$

- Sum of the first n terms:

[

$$S_n = \frac{n}{2} (u_1 + u_n)$$

]

Typical Problems

Problem Example:

Given an arithmetic sequence with first term $u_1 = 3$ and common difference $d = 2$, find the sum of the first 20 terms.

Solution:

- Find the 20th term:

[

$$u_{20} = u_1 + (20 - 1)d = 3 + 19 \times 2 = 3 + 38 = 41$$

]

- Use the sum formula:

[

$$S_{20} = \frac{20}{2} (u_1 + u_{20}) = 10 \times (3 + 41) = 10 \times 44 = 440$$

]

Discrete Mathematics (Arithmétique) and Combinatorics

Applications in the Capes Exam

Discrete mathematics involves counting techniques, logic, set theory, and combinatorics. These are often used to solve problems involving arrangements, partitions, or logical deductions.

Key Concepts

- Permutations and combinations
- Principle of inclusion-exclusion
- Binary representations and logical statements
- Graph theory basics (if applicable)

Typical Question: Counting Arrangements

Problem:

How many different arrangements are possible for the letters in the word "ALGEBRA" considering the repeated letter "A"?

Solution:

- The total letters: 7
- Repetitions: "A" appears twice.
- Number of arrangements:

\[

$$\frac{7!}{2!} = \frac{5040}{2} = 2520$$

\]
